Hackathon Awards

Project Intergate - Third Prize in Hatch London   Nov 2017
A solution aiming for refugees. we developed an application to provide them with a more easy way to adapt to the unfamiliar nation. Within the application, the users can easily to know where to reach the information to help them settle down, it provides an online document storage feature as well. We have connected with the chief digital and information officer in Ministry of Justice to continue on developing the project.

Side Project

Attendance System UI   **www.github.com/linuk/Attendance-UI**
A web interface of an attendance system before the interview. It fetches the employee's daily logs of entering and leaving time from the database, calculates the average working hours within a month or a year, and shows the statics in the table or the line chart. It also provides search features to search specific data of the employee.
Technologies used: HTML5, SASS, CSS3, AJAX, jQuery, MySQL, PHP
